Assisngment # 01

Question :04

```
jug1 =4
jug2 =3
target =2
x ,y =0,0
visited = set()
while(x,y) not in visited:
  visited.add((x,y))
  print(x,y)

  if x==target or y==target:
    print(f"Target Reached: ({x},{y})")
    break

    if x==0:
      x=jug1
      elif y < jug2:
        transfer=min(x , jug2- y)
        x-= transfer
        y +=transfer
        else:
          y=0
```

```
0 0
4 0
1 3
1 0
0 1
4 1
2 3
Target Reached: (2,3)
```
